

SEE AN UNATTENDED CHILD OR ANIMAL IN A CAR ON A HOT DAY?

HERE'S WHAT YOU DO:

1

CALL 911

2

CHECK FOR SIGNS OF OVERHEATING:

- Fast, noisy breathing
- Vomiting
- Disorientation
- Lack of responsiveness
- Collapse

3

CHECK VEHICLE DOORS:

- If unlocked, remove child or animal.
- If locked, break glass and remove child or animal.
- If owner returns, advise them that the police are on their way. Don't confront the individual.

**If you decide to break the window, be safe.
Watch out for broken glass and aggressive animals.**

A VEHICLE IS NOT A BABYSITTER.

A vehicle is a false sense of security. It only takes seconds for a child or pet to be put at risk.

If you're not with your children or pets, you can't protect them. Don't let a moment of convenience become a lifetime of regret – never leave children or pets alone in a vehicle.

FACT:

On a warm day, even vehicles parked in the shade with windows down can reach a staggering

**49°C
IN MINUTES.**

FACT:

Pets get heatstroke more quickly than kids because they can't cool themselves off by sweating.

They only have sweat glands on their paws and they don't do much good on a hot car seat.

FACT:

Extreme heat affects infants and small children more quickly and dramatically than adults because of their size.

Their core temperature can increase

3-5X FASTER
than that of an adult..
