# Service Controlled Clothing and Equipment Policy

---

## Purpose:

To define the manner in which service controlled clothing and equipment owned by EPS are managed.

## Statement of Principle:

The effective management of service controlled clothing and equipment supports the goals of the EPS by helping to ensure that the needs of EPS operations can be met within budgetary constraints.

## Policy Statement:

The EPS will manage its inventory in relation to clothing and equipment in a strategic and cost-effective manner to satisfy operational requirements while adhering to related legislative and administrative policy and procedural demands.

Acquisitions of service controlled clothing, equipment (including weapons, armour and accessories) must be made through Supply Logistics Section (SLS), as part of Procurement, Contracts and Supply Logistics Branch unless otherwise authorized by the Manager i/c SLS or higher.

Surplus and salvage inventory is managed through SLS. SLS should be contacted directly for the proper procedure.
